

Digital Wallet System

User Scenarios

- Alex is a college student who shares an apartment with three roommates. When his roommate Maria paid the landlord the full rent, Alex needed to send her his share. He opened DigiWallet, logged in with his email and password, selected "Send Money", entered Maria's email, and typed in his share of the rent. The system checked his wallet balance and completed the transfer instantly.
- Alex noticed his wallet balance was getting low, so he selected "Add Money to Wallet", chose his linked bank account, and entered a deposit amount. The bank account was debited and Alex's wallet balance was updated. The transaction appeared in his history as "COMPLETED".
- Maria is a young professional who also does freelance design work on the side. A client owed her payment for a completed project. Maria sent a "Request Money" through the app, entering the client's email and the amount owed. The request appeared in her transaction history as "PENDING".
- Maria wanted to move her accumulated wallet balance to her bank account. She selected "Withdraw to Bank", chose her linked checking account, and entered the amount. The system verified her wallet balance, processed the withdrawal, and recorded the transaction as "COMPLETED".
- Maria also wanted to add her credit card as a backup payment method. She selected "Link Payment Method", chose "Credit Card", filled in her card number, expiry date, and card type. The system saved it to her profile alongside her bank account.
- Carlos owns a small convenience store and started accepting DigiWallet payments to reduce cash handling. Customers send money directly to his registered email using the "Send Money" feature. Carlos receives the funds instantly in his wallet balance.
- At the end of the week, Carlos wanted to transfer his accumulated wallet balance to his business bank account. He opened the app, reviewed his transaction history to confirm all payments had been received, then selected "Withdraw to Bank". He chose his linked business bank account and entered the full balance. The system processed the transfer and Carlos received his funds.
